

Determining Motor Parameters

To Do:-

- Determine Direction (To verify code that it)
- Getting Pulses
- Counting Pulses
- Pulses Per Rotation of Motor (encoder wheel) 12.
- Pulses Per Rotation (PPR) (O/P Shaft) 1340

Establishing PID Control for desired no. of Pulses

- If you can use capacitors then use capacitors with both IC of L293D

Pins:

Encoder ch A: 32

Encoder ch B: 33

PPR Encoder wheel: - 12

PPR Motor shaft: - 1340

$$\text{Gear Ratio} = \frac{1340}{12} = 111.67 \approx 112$$
